# WorkitSA — 90-second hackathon video (brief for Simphiwe)

Hi Simphiwe — thanks for doing this! Here's everything you need to record the demo video for the **FNB App of the Year Hackathon 2026**. It's short, and this doc walks you through it step by step. No experience needed.

---

## When to record — wait for Tshepo's go-ahead

The WhatsApp feature is **built and working**. Tshepo will message you to say "go" (likely over the hackathon weekend, 23–25 October) and will set up two things for you first:

1. **Add your phone number** to the test list so the WorkitSA WhatsApp line can message you.
2. Be ready to **accept your offer behind the scenes** during recording, so the **START** / **DONE** steps unlock (easiest if you're on a quick call with him while you record).

Please don't start before his go-ahead, or the WhatsApp part won't respond.

## What is this, in one minute?

- **The hackathon:** FNB (the bank) runs an "App of the Year" competition. We're entering **WorkitSA** under the *"Youth employment & work readiness"* challenge.
- **The video is a required part of our entry.** Judges watch a **90-second demo video** to see the app in action and score us on it — so a clear, confident video genuinely helps us win.
- **Our angle:** WorkitSA connects young South Africans to everyday work nearby. For the hackathon we built a **WhatsApp Job Channel** — someone with *no data and no app* can find work, do it, and walk away with a **shareable Work Record** (a proof of work), all inside one WhatsApp chat. That whole journey is the star of the video.

## The golden rules (please stick to these)

1. **Maximum 90 seconds.** Hard limit — if it's 91 seconds it can be disqualified. Aim for ~85.
2. **Speak slowly and clearly.** The script is short *on purpose* so you never rush.
3. **Add captions/subtitles** (text on screen) — many people watch on mute.
4. **Film on a phone is perfectly fine.** Hold it steady or prop it up.

5. **Quiet room** for the voice. Recording your voice separately and talking over the

screen recording is best — but one clean take is okay too.

## Set up before you record (2 minutes)

- On the phone you'll record with, **save this number as a contact called

"WorkitSA Jobs": +1 555 667 9905**. (It's our test line for now — saving it as a

contact means the chat shows "WorkitSA Jobs" instead of a strange number. A South

African number replaces it after the competition.)

- Open **https://workitsa.co.za** in the phone's browser (for the "find work" screen).
- Tshepo will send you any admin screenshots you need (the "Live Pulse" map + the

assistant) — you don't need to log in for those.

- **Do one full practice run first** (see the taps below), then clear the chat and

record it clean.

---

## The script — 6 short beats (this is the whole video)

Say the line in **"quotes"**, film what's in *italics*. Times are a guide.

**1. The problem (0:00–0:10)**

*Film: the WorkitSA logo / home page.*

> *"Nearly half of young South Africans can't find work — often not for lack of skill, but because the bridge to it costs data, an app, and taxi fare."*

**2. What WorkitSA is (0:10–0:20)**

*Film: scroll the "Find work" job list at workitsa.co.za.*

> *"WorkitSA is a live marketplace for everyday work — post a job, nearby verified workers match, accept, and get rated."*

**3. The WhatsApp offer — the big one (0:20–0:40)**

*Film: the "WorkitSA Jobs" chat. Type **JOBS** a numbered list of jobs appears

reply **1** " Offer sent" shows.*

> *"So this hackathon we built a WhatsApp Job Channel — work with no app and almost no data. Text JOBS, see real jobs nearby, reply with a number — and your offer reaches the employer instantly."*

**4. Doing the job (0:40–0:54)**

*Film: same chat. Type **START** "Marked as started" type **DONE** "Marked as

done".* (Tshepo accepts your offer just before this so it works.)

> *"You get the job, you do the job — start and finish, all by text. No smartphone required, no data bundle burned."*

**5. The Work Record — the payoff (0:54–1:12)**

*Film: the " … Here's your Work Record" message arrives tap the link the Work

Record page opens (name, ID verified, jobs, earnings, rating). Scroll it once.*

> *"And here's what makes it stick: the moment a job is confirmed, WorkitSA sends back a Work Record — proof of work a young person can share with a landlord, a lender, or the next employer. Employment, and work-readiness, in one message."*

**6. Close (1:12–1:30)**

*Film: the Live Pulse map + assistant screenshot, then the logo.*

> *"Behind it, our AI co-pilot watches demand and flags fraud. Free to grow, then a small 8% fee makes it sustainable. WorkitSA — work, found nearby. Try it at workitsa dot co dot za."*

That's it — six short lines.

---

## Exact taps for the WhatsApp parts (beats 3–5)

In the **"WorkitSA Jobs"** chat, one message at a time, waiting for each reply:

1. Send **`JOBS`** the numbered job list comes back.
2. Send **`1`** " Offer sent".
3. *(Tshepo accepts your offer now — give him a moment.)*
4. Send **`START`** " Marked … as started".
5. Send **`DONE`** " Marked … as done".
6. The **" … Here's your Work Record …"** message arrives **tap the link**

let the page load, scroll slowly once.

## Recording tips

- **Easiest method:** use your phone's built-in **screen recorder** for the app +

WhatsApp, then record your voice over it afterwards. If that's fiddly, narrate live

while you tap — slowly.

- Get the **beats (the offer, and the Work Record) clean first** — they matter most.
- Keep captions short — basically the bold words from each beat.
- When done: **check it's under 90 seconds**, then send the video (or a link) to Tshepo.

## Quick checklist before sending

- ■ Under 90 seconds
- ■ The WhatsApp **`JOBS 1 Offer sent`** part is clearly visible
- ■ The **`START DONE`** and the **Work Record link** are shown
- ■ Captions are on
- ■ Voice is clear, not rushed
- ■ Sent to Tshepo

Thank you! This video is a big part of the entry — you've got this.
